PROFESSIONAL SUMMARY

Second-year(2024–2028) Computer Engineering student at **Vidyavardhini's College of Engineering & Technology** (Autonomous) with an 8.00 CGPA, skilled in web development, backend technologies, and database management. Experienced in building real-world projects using JavaScript, Node.js, Firebase, and MySQL. Passionate about AI, problem-solving, and developing scalable software solutions through academic projects, hackathons, and technical competitions.

ACADEMIC PROJECTS

Grievance Hub – Online Complaint Management System | [Live Demo](#)

2026

Tech Stack: Frontend: HTML5, CSS3, Bootstrap 5, JavaScript (ES Modules) | Backend: Node.js, Express 5, Firebase Admin SDK | Infra: Firebase Auth, Firestore, Hosting, Render, GitHub Actions

- Engineered a full-stack grievance portal with a Node.js + Express REST API deployed on Render and a Firebase-hosted frontend, implementing clean separation of concerns across client, server, and database layers.
- Secured all API endpoints with Firebase JWT middleware (verifyIdToken), enforcing role-based access control — students route to their dashboard while the admin identity is verified server-side before accessing protected /api/admin routes.
- Designed a Firestore NoSQL schema for users and complaints with ownership-based access control, ensuring students can only view and delete their own records via server-side UID verification.
- Implemented Firebase Authentication with Google Sign-In and email/password login, supporting full complaint lifecycle management (Not Processed → In Process → Closed) with admin notes and anonymized student IDs.
- Built a GitHub Actions workflow to ping the Render backend every 14 minutes, eliminating cold-start delays on the free tier and ensuring seamless availability for end users.

Society Management System

2026

Tech Stack: Backend: PHP 8+, MySQL (phpMyAdmin) | Frontend: HTML5, CSS3, JavaScript | Server: XAMPP (Apache)

- Built a full-stack PHP & MySQL web application digitizing residential society operations — covering flat management, maintenance billing, payment tracking, and resident records for a 4-member team project.
- Implemented role-based access control with secure session authentication (password_hash/password_verify), providing separate dashboards for Admins and Residents with protected page routing.
- Designed a normalized relational MySQL schema across 6 tables (users, admins, flats, bills, payments, society) enabling full bill lifecycle management from generation to payment reconciliation.

Campus QueryBot | [Live Demo](#)

2025

Tech Stack: Frontend: HTML5, CSS3, JavaScript (ES6+), Web Speech API | Backend & AI: Gemini API, Firebase (Firestore & Hosting)

- Built a helpdesk chatbot in a 4-member team using Gemini API and Firestore, restricting answers to a verified FAQ database to prevent AI hallucinations.
- Developed a responsive HTML/CSS/JS interface with dark mode toggling and Web Speech API integration for hands-free voice input.
- Automated student inquiries via a 24/7 portal on Firebase Hosting, achieving a 95% accuracy rate across 50+ user-tested queries.

TECHNICAL SKILLS

Languages: HTML, CSS, JavaScript, C, Java, Python

Backend: Node.js, Express.js

Databases: Firebase Firestore, MySQL

Tools: Git, GitHub, VS Code

Concepts: REST APIs, CRUD Operations, Web Development, OOP

HACKATHONS & TECHNICAL EVENTS

TechSprint – Leveraging the Power of AI

Organized by Google Developer Groups On Campus

- Participated in an open innovation AI-focused hackathon, working on AI-driven problem solving and software innovation using modern technologies.

SAAVISHKAR 2026

National-level Software Project Competition | Organized by IEEE Computer Society & MPSTME

- Participated in a national-level software project competition, showcasing technical projects to an industry judging panel.
